

CMT Awards Engineering Scholarships

Crawford, Murphy & Tilly, Inc. recently awarded scholarships to two students seeking civil engineering degrees at the University of Illinois in Champaign. Jacob Henschen and Kevin Spitz were selected to receive the two-year renewable scholarships based on their academic performance, leadership and record of financial self-support. Brian Welker, a manager in CMT's Aurora office and a U of I alum, presented the scholarships at a luncheon on campus.

Henschen, from Springfield, Illinois, is concentrating on structural engineering and plans to pursue a master's degree upon completion of his undergraduate studies. Spitz's primary area of study is construction management with a secondary in transportation. The Buffalo Grove, Illinois native also plans to earn his master's degree before embarking on his career as a civil engineer. CMT congratulates both of these young men for the hard work and dedication that they have exhibited during their academic careers.

CMT established a scholarship program in 1995 to support the study of civil engineering and to reward individuals who distinguish themselves while pursuing their degrees. Scholarships are also awarded biennially to engineering students at the University of Missouri-Rolla and Bradley University in Peoria, Illinois.
