

CMT-Indiana Wins Engineering Excellence Award

US 40 Rehabilitation project named winner of ACEC-Indiana Merit Award

The U.S. 40 Road Rehabilitation project received a Merit Award at the 2010 American Council of Engineering Companies-Indiana's (ACEC-IN) annual Engineering Excellence Awards banquet. CMT served as prime consultant to the Indiana Department of Transportation (INDOT) for the roadway project.

CMT worked with INDOT - along with the cities of Dublin, Mt. Auburn and Cambridge City - to rehabilitate a four-mile stretch of U.S. 40. The project corridor included diverse and undulating topography that provided unique challenges with respect to hydraulic modeling and analysis. In order to better characterize and analyze the drainage, CMT employed a hybrid approach using multiple modeling applications. The roadway design also incorporated streetscape features requested by stakeholders to provide a context-sensitive solution that ensures the integrity of this section of the historic National Road. Throughout the project CMT worked with INDOT to ensure that the final construction project would adhere to funding limitations.
