

CMT Again Named Among Top 25 Aviation Design Firms

Firm also makes big jump on the list of Top 500 Design Firms

Crawford, Murphy & Tilly, Inc. (CMT) was recently named one of the top 25 engineering consultants serving the aviation industry. *Engineering News Record (ENR)* publishes the list annually and bases the ranking on market revenue. The Springfield, IL-based firm was first named to the prestigious list in 2000 and it continues to serve airports throughout the country.

“A top 25 *ENR* is a clear indicator that CMT is not only a technical leader in the Midwest, but we’ve also achieved national prominence,” said Michael Doerfler, the firm’s director of aviation.

The firm first established its reputation while serving general aviation and small commercial airports in Illinois and Missouri before expanding its services to include larger commercial airports and reach other geographical areas. Included among CMT’s long-term clients are Lambert-St. Louis International Airport, Chicago O’Hare International Airport and Washington Dulles International Airport. The firm also works at military airfields across the nation.

In addition to its success in the aviation market, CMT was able to navigate the economic difficulties of the past year and posted an impressive gain on *ENR*’s ranking of the Top 500 Design Firms in the country. The firm jumped up 70 spaces to the 240th spot on the list.

“In today’s extremely competitive marketplace, it’s particularly rewarding to see CMT achieve such growth relative to our industry peers,” said CEO Brian Whiston. “Our growth can be attributed to our commitment to professionalism and technical excellence.”

CMT has been working at Dulles International Airport since 1982.
