

CMT Strengthens its Commitment to Indiana Airports

Two aviation professionals make the move to CMT's Indy office

Crawford, Murphy & Tilly, Inc. (CMT) recently announced two reassignments in their aviation unit. Jason Frank, P.E. and Adam French have joined the firm's Indianapolis office in a move that will strengthen CMT's ability to serve airports in Indiana

Jason Frank is a professional engineer with over 20 years of experience in the aviation industry. While working at CMT headquarters in Springfield, IL, he developed the technical and project management capabilities and outstanding people skills that have made him a first-rate project manager. Frank has worked on numerous projects at Washington Dulles International Airport and the new runway project at Chicago's O'Hare International Airport. He also has extensive experience working at military airfields across the country.

Adam French is an aviation planner and an Indiana native returning home after three years working in CMT's Columbus office. French was the project planner on a Land Use Plan at Smith Field in Fort Wayne and worked on an Airport Layout Plan for Hendricks County Airport. Before joining CMT, French was employed by the Indiana Department of Transportation's Office of Aviation.

CMT is one of the top 25 aviation design firms in the country, according to *Engineering News Record* magazine. In Indiana, the firm has completed projects Fort Wayne International Airport, Fort Wayne Smart Field, Hendricks County Airport and South Bend Regional Airport. The addition of Frank and French to the Indianapolis office will allow the firm to expand its services to its current and future Indiana clients.
